SUMMARY

Software Engineer who builds and runs HedgeWithAI, a cloud-native AI trading-intelligence platform that turns live candlestick market data into signals for traders on web, iOS and Android, as one of five engineers at an early-stage startup. Owns features end to end: Angular/React and TypeScript front ends over WebSocket streams, Node.js and Python services, and a serverless AWS backend (Lambda, DynamoDB, EventBridge, SageMaker, Kinesis) promoted through test and main environments to production with GitHub Actions and AWS SAM. MS in Computer Science, Michigan Technological University (GPA 3.85).

EXPERIENCE

Software Engineer

Jun 2025 – Present

Nubes Opus (AL Cloud Services) | Prosper, TX

- Build and operate HedgeWithAI, a cloud-native AI trading-intelligence platform that turns live candlestick market data into real-time alerts, predictions and portfolio insights for traders on web, iOS and Android; one of five engineers owning features end to end.
- Build and maintain serverless microservices on AWS: Lambda, DynamoDB, S3, EventBridge and CloudWatch, designed for high-volume candle and account data.
- Built the EventBridge-scheduled Lambda pipeline that fetches candlestick (OHLCV) data across intervals, runs the platform's signal algorithms and ML models, and sends pre-market and entry/exit alert emails through SES, with SQS queuing between stages.
- Developed Node.js and Python 3.12 services that ingest candle data, run trading workflows and expose secure REST APIs for accounts, portfolios and signal delivery.
- Built WebSocket services that stream live market data and signal updates to the Angular and React dashboards and keep client state in sync with server-side jobs.
- Integrated Amazon SageMaker model endpoints for trend prediction and signal generation, and wrote the Python modules that compute the indicators and features from candle data that the models consume.
- Built LLM features on the OpenAI API with retrieval-augmented generation (RAG) grounded in the platform's own market data, used for trading-strategy research over candlestick data and for market sentiment analysis.
- Own the ETL pipelines for second-, minute- and daily-interval candlestick (OHLCV) data and the historical archive behind them, built on Lambda, S3 and DynamoDB in Python, with validation for missing and incorrect data before it is used.

IT & Software Intern

Aug 2020 – May 2021

Reliable Agencies | Hyderabad, India

- Built Django/Python web applications for a mid-size manufacturer to manage orders, new contracts and cross-department workflows, moving paper-based processes online.
- Automated management reporting with Excel macros, VBA and pivot tables, cutting manual reporting time by roughly a third and reducing data-entry errors.
- Analyzed operational data and built performance dashboards used for production planning, inventory control and resource allocation.

Administrator (Internship)

Jul 2022 – Sep 2022

Salesforce | Hyderabad, India

- Troubleshoot Salesforce email campaigns, workflow rules and autoresponders: traced excessive bounced mail to configuration and sender-authentication problems and reworked the delivery setup to fix it.
- Repaired data records that users could not reach because of misassigned record types and ownership, using SOQL to find the affected records and Data Loader to correct them in bulk.
- Configured role hierarchies, sharing rules and field-level security so teams could view and update the records they needed without exposing fields they should not see.

PROJECTS

TechStatView (published, IJARSET 2023)

Jan 2023 – Jul 2023

College major project, Vardhaman College of Engineering

- Django/Python college intranet with real-time attendance tracking, centralized grades and leave records, and role-based access control for students and staff; published in IJARSET 2023.

Smart Traffic Control Using Computer Vision

Sep 2023 – Oct 2023

College project, Vardhaman College of Engineering

- Adaptive traffic-signal controller in Python: OpenCV pipeline (Gaussian blur, Canny edges, contour analysis) counts vehicles, a TensorFlow/Keras CNN classifies congestion (about 85% detection accuracy), YOLO added for faster detection.

EDUCATION

Master of Science in Computer Science

Michigan Technological University | Houghton, MI | GPA 3.85

Aug 2023 – Aug 2025

Bachelor of Technology in Computer Science and Engineering

Vardhaman College of Engineering | Hyderabad, India | GPA 3.26

Aug 2019 – May 2023

PUBLICATIONS

"An INTRANET-Based Web Application for College Management System Using Python with Django Web Framework", IJARSET, 2023.

CERTIFICATIONS

Python Full-Stack Bootcamp, one-month bootcamp, Brainovision Solutions India Pvt. Ltd., Aug 2021.

SKILLS

Languages: JavaScript, TypeScript, Python, Java, SQL, HTML/CSS, C, C++

Frameworks & Libraries: React, Angular, Node.js, Django, REST APIs, WebSockets, Next.js, RxJS, Redux, Tailwind CSS, Express, FastAPI, Spring Boot

Cloud & DevOps: AWS (Lambda, DynamoDB, S3, EventBridge, SQS/SES, Kinesis, CloudWatch, SageMaker, CodePipeline, SAM), Serverless architecture, Event-driven pipelines, Docker, GitHub Actions (CI/CD), Linux, Git/GitHub

Databases: DynamoDB, PostgreSQL, MongoDB, Redis, MySQL

Integrations: Charles Schwab brokerage API with OAuth, Candlestick (OHLCV) market data, Push notifications, Stripe (payments)

ML & Computer Vision: OpenAI API, RAG (retrieval-augmented generation), Amazon SageMaker, NumPy/Pandas, Sentiment analysis, TensorFlow/Keras, OpenCV, scikit-learn, YOLO

Data Engineering & Research: ETL pipelines, Time-series (OHLCV) data, Strategy backtesting (in-sample, out-of-sample), Data validation and quality checks, Candlestick-pattern and trend analysis, Feature engineering, AI agents for data workflows

Tools: AI coding agents (Kiro, Claude), Salesforce administration, UiPath RPA
